Education

Air University Islamabad
BS Software Engineering

Pakistan
08/2020 – 06/2024

Experience

- Jfreaks**
Full-Stack Developer
07/2024 – Present
- Optimized MERN Next.js applications, implementing advanced caching, lazy loading, and server-side optimizations, improving performance by 20%.
 - Designed and streamlined high-performance REST APIs, reducing response times by 30% through efficient database queries, and load balancing.
 - Migrated Capra-Chat (RAG chatbot) from Java to JS, integrating Stripe, adding new features for such as shareable chatbot links for testing the functionality of the chatbot.
 - Enhanced API Freaks backend with SWR, reducing loading times by 25%.
 - Managed CommodityPriceAPI, adding multi-service architecture and in system trial feature for the new users and developers to test out the apis.
 - Introduced caching in Node.js applications, cutting API latency from 2s to 300ms.
- Apexion**
Backend Developer Intern
06/2023 – 08/2023
- Refactored backend services using Node.js, enhancing system performance by 15% through efficient query handling and memory management.
 - Diagnosed and resolved 10+ critical issues weekly, improving system stability and boosting development efficiency by 20%.
 - Designed and implemented RESTful APIs, optimizing request handling and database interactions, leading to a 15% reduction in response times.
 - Contributed to Agile development workflows, refining sprint planning and CI/CD processes, accelerating feature delivery by 30%.

Projects

CommodityPriceAPI (commoditypriceapi.com):

- Implemented caching strategies, reducing API response times from an average of 2 seconds to 300-500 milliseconds, leading to a 4x improvement in performance and a smoother UX.
- Developed a currency conversion module, ensuring real-time exchange rate accuracy and seamless transactions, which increased the platform's global usability by 35%.
- Optimized front-end performance by implementing lazy loading, code splitting, and asset minification, leading to a 25% reduction in page load times and improved responsiveness across devices.
- Integrated tier-based rate-limiting, dynamically adjusting API usage based on user subscription levels, ensuring fair resource distribution and preventing abuse while increasing revenue opportunities.

TweetStorm (tweetstorm.ai):

- Migrated the ORM from Prisma to Knex, resulting in efficient database queries and reducing query execution time by 35%, improving API responsiveness.
- Refactored and optimized API endpoints, enhancing request throughput and reducing response times by 20%.
- Optimized database indexing and query execution plans, reducing read latency by 30%, ensuring efficient data retrieval for high-traffic queries.
- Implemented caching and optimized asset delivery, boosting site performance and SEO rankings while improving Core Web Vitals scores, leading to a Lighthouse performance score increase from 55 to 97.

API Freaks (apifreaks.com):

- Integrated a role-based access control (RBAC) system, increasing feature adoption by 15%, allowing for better user experiences.
- Developed an intuitive rate calculator, improving pricing transparency and reducing customer inquiries by 25%, leading to better UX and conversion rates.
- Authored detailed API documentation, reducing developer onboarding time by 40% and enhancing integration efficiency, leading to higher API adoption rates.

Technical Skills

Languages: JavaScript, TypeScript, SQL

Frameworks: Node.js, Express.js, React.js, Next.js

Databases: MongoDB, MySQL, PostgreSQL, Prisma, Knex.js

Tools: Git, Postman, PM2, Redis, Docker

Other: REST APIs, JWT Auth, Caching, Stripe Payments, Agile
